BAY PRIME

(Cold Applied Bitumen Emulsion)

DESCRIPTION:

BAY PRIME is ready-to use water based bituminous emulsion protective and damp-proof coating. The coating forms a black protective film. The finished film forms tough barrier to vapor transmission.

ADVANTAGES:

- Easy and direct (cold) application, no-preheating required.
- Resistant against chloride and sulphate ions present in water
- Corrosion resistant and vapour barrier

USES:

- Protective coating for foundations, timber, metal, etc.
- Damp-proofing of regular surface like concrete, and As-bests.
- As a general waterproofing material.

SURFACE PREPARATION:

Application surface must be clean and free from dust, grease & loose rust.

COVERAGE:

Metallic surface : 4-6 m²/liter/coat.

Concrete surface : 2-6 m²/liter/coat. (Depending upon the porosity of the surface)

CLEANING:

Can be cleaned with water before dry or any suitable petroleum solvents.

PRECAUTION:

Stir thoroughly before use. Successive coat should be applied after minimum 2 to 3 hours of previous applied coat.
